

Kody Technologies LLC

Bike Rack Light – Kuat Sherpa

Congratulations on your purchase and thank you for your commitment to road safety for your bikes, friends, family, and those around you. Read and follow this instruction guide to install your new Kody Bike Rack Light.

Disclaimer

Tail, Brake and Turn signal lights are a critical safety feature during the operation of your vehicle. Rack lights increase your vehicle's visibility when the lights are obstructed by a bike rack, or any other device mounted to the rear of the vehicle. Please read and review all information carefully before installation. Install the light per the instructions and verify functionality on a regular basis. If you have any questions or concerns, please contact us at Kody Technologies.

- Always verify cable routing and connection and test light function prior to driving, using the light and relying on it for your safety.
- This light adds four pounds to the load on your bike rack. Check rack manufacturer's manual to verify the total load on the rack does not exceed any limits.
- Rack lights improve your visibility and signal communication on the road. They are not a substitute for driving safely and following all traffic laws.
- Kody assumes no liability for injury to persons, damage to movable or immovable property, loss of profit, or any other loss or damage caused by the improper mounting or use of the carrier, including but not limited to mounting or use in conflict with the assembly instructions, mounting instructions or any other instructions given, in writing or verbally, by Kody.

Kody Technologies LLC does not assume any responsibility or liability for accidents or injuries resulting from the use of this product or misuse of this product.

Bike Rack Light – Kuat Sherpa

Installation Instruction

Model#: 101-023

The rack light is installed at the back of the rack and is strapped to the bike tray. It fits cleanly and doesn't affect any tray operation or bike loading. It's best to complete this installation with the rack mounted to your vehicle.

1. Apply the protective pads on the rack at the light install location. Pads should be about 5" apart and centered on the end cap.

2. Feed the clamps through the bracket mount holes lining up the buckles below the rack. Set the light in place lining it up on the pads.

3. Run the Hose Clamps around the bike tray and secure. For the hose clamps, feed the flat end of the clamp into the worm drive screw and tighten the screw until the light bracket is held in place.

Protect Your Ride

4. Route the cable along the length of the rack to the vehicle's connection and use cable ties to secure the cable to the rack frame. Bike racks have many pivot points. Be sure to route the cable away from and around pivots to keep them from getting pinched.

5. Connect the light to your vehicle's trailer connection and test all light functions (tail, brake, hazard, left and right-hand turn signals).
6. If signals do not function correctly on your vehicle, please see the "How to" page on our website for LED Trailer Lights or contact us.
7. Final Step: Install Kody Sticker on your bike, bike rack or vehicle. Have fun and be safe!
