## Bike Rack Light – RockyMounts GuideRail

Congratulations on your purchase and thank you for your commitment to road safety for your bikes, friends, family, and those around you. Read and follow this instruction guide to install your new Kody Bike Rack Light.

### Disclaimer

Tail, Brake and Turn signal lights are a critical safety feature during the operation of your vehicle. Rack lights increase your vehicle's visibility when the lights are obstructed by a bike rack, or any other device mounted to the rear of the vehicle. Please read and review all information carefully before installation. Install the light per the instructions and verify functionality on a regular basis. If you have any questions or concerns, please contact us at Kody Technologies.

- Always verify cable routing and connection and test light function prior to driving, using the light and relying on it for your safety.
- This light adds four pounds to the load on your bike rack. Check rack manufacturer's manual to verify the total load on the rack does not exceed any limits.
- Rack lights improve your visibility and signal communication on the road. They are not a substitute for driving safely and following all traffic laws.
- Kody assumes no liability for injury to persons, damage to movable or immovable property, loss of profit, or any other loss or damage caused by the improper mounting or use of the carrier, including but not limited to mounting or use in conflict with the assembly instructions, mounting instructions or any other instructions given, in writing or verbally, by Kody.

Kody Technologies LLC does not assume any responsibility or liability for accidents or injuries resulting during use of this product or misuse of this product.

### Product Warranty

We've designed an extremely rugged rack light and are proud to provide a 1-year warranty on any failure on the electronics or hardware. If you experience any issues with your light please contact us, return it and we'll ship you a replacement.

### Return Policy

If you are not 100% satisfied with the rack light, please contact us to let us know. We offer a 30-day hassle-free return policy. Return the light assembly in like-new condition and we'll ship you a replacement or refund your money. Most importantly we want to understand any issues you experience so we can address them, and we can continuously improve our products.

## Bike Rack Light – RockyMounts GuideRail

### Installation Instruction

Model#: 101-016

The rack light installs at the back of the rack onto the end cap mounting screws. It uses the existing hardware plus spacers, fits cleanly and does not affect any tray adjustment or bike loading.

1. Review the hardware and light in prep for the installation. Remove two end cap screws with a 5mm allen wrench.

2. Set the light in place lining up the side holes with the end cap screw holes.

3. There will be a gap between the bracket and the bike frame. Install the provided black washers between the rack and bracket and install screws. It should fit one washer on one side and two on the other.

Screws  
Tightened with  
Two Spacers

4. Tighten the screws while holding the light flat on the bike rack frame.

5. Route cable along length of the rack to the vehicle connection and use cable ties to secure the cable to the rack frame. Bike racks have many pivot points. Be sure to route the cable away from and around pivots to keep them from getting pinched.
6. Connect the light to your vehicle's trailer connection and test all light functions (tail, brake, hazard, left and right-hand turn signals).
7. If turn signals do not function correctly on your vehicle, please see the "How to" page on our website for LED Trailer Lights or contact us.
8. Install license plate below the light using the provided Phillips head or thumb screws.
9. Final Step: Install Kody Sticker on bike, bike rack or vehicle. Have fun and be safe!
